## Introduction

Respiratory tract infections (RTIs) are infectious diseases involving the respiratory tract. An infection of this type usually is further classified as an upper respiratory tract infection (URI or URTI) or a lower respiratory tract infection (LRI or LRTI).

Lower respiratory tract infections are generally more severe than upper respiratory infections. LRIs are the leading cause of death among all infectious diseases.

## Introduction

Of the viruses that cause respiratory infections in humans, most have seasonal variation in prevalence.

- Influenza, Human orthopneumovirus (RSV) and human coronaviruses are more prevalent in the winter.
- Adenovirus, Human bocavirus and Human metapneumovirus occur year-round.
- Rhinoviruses (which cause the common cold) occur mostly in the spring and fall.
- Human parainfluenza viruses have variable peaks depending on the specific strain.
- Enteroviruses, with the exception of rhinoviruses, tend to peak in the summer.

## Coronaviridae

### Coronaviruses

Coronaviruses are large, enveloped RNA viruses.

The human coronaviruses cause common colds, may cause lower respiratory tract infections.

Novel coronaviruses have been identified as the cause of:

- Severe acute respiratory syndrome (SARS 1 & 2)
- Middle East respiratory syndrome (MERS)

# Coronaviridae

## Classification

There are two subfamilies:

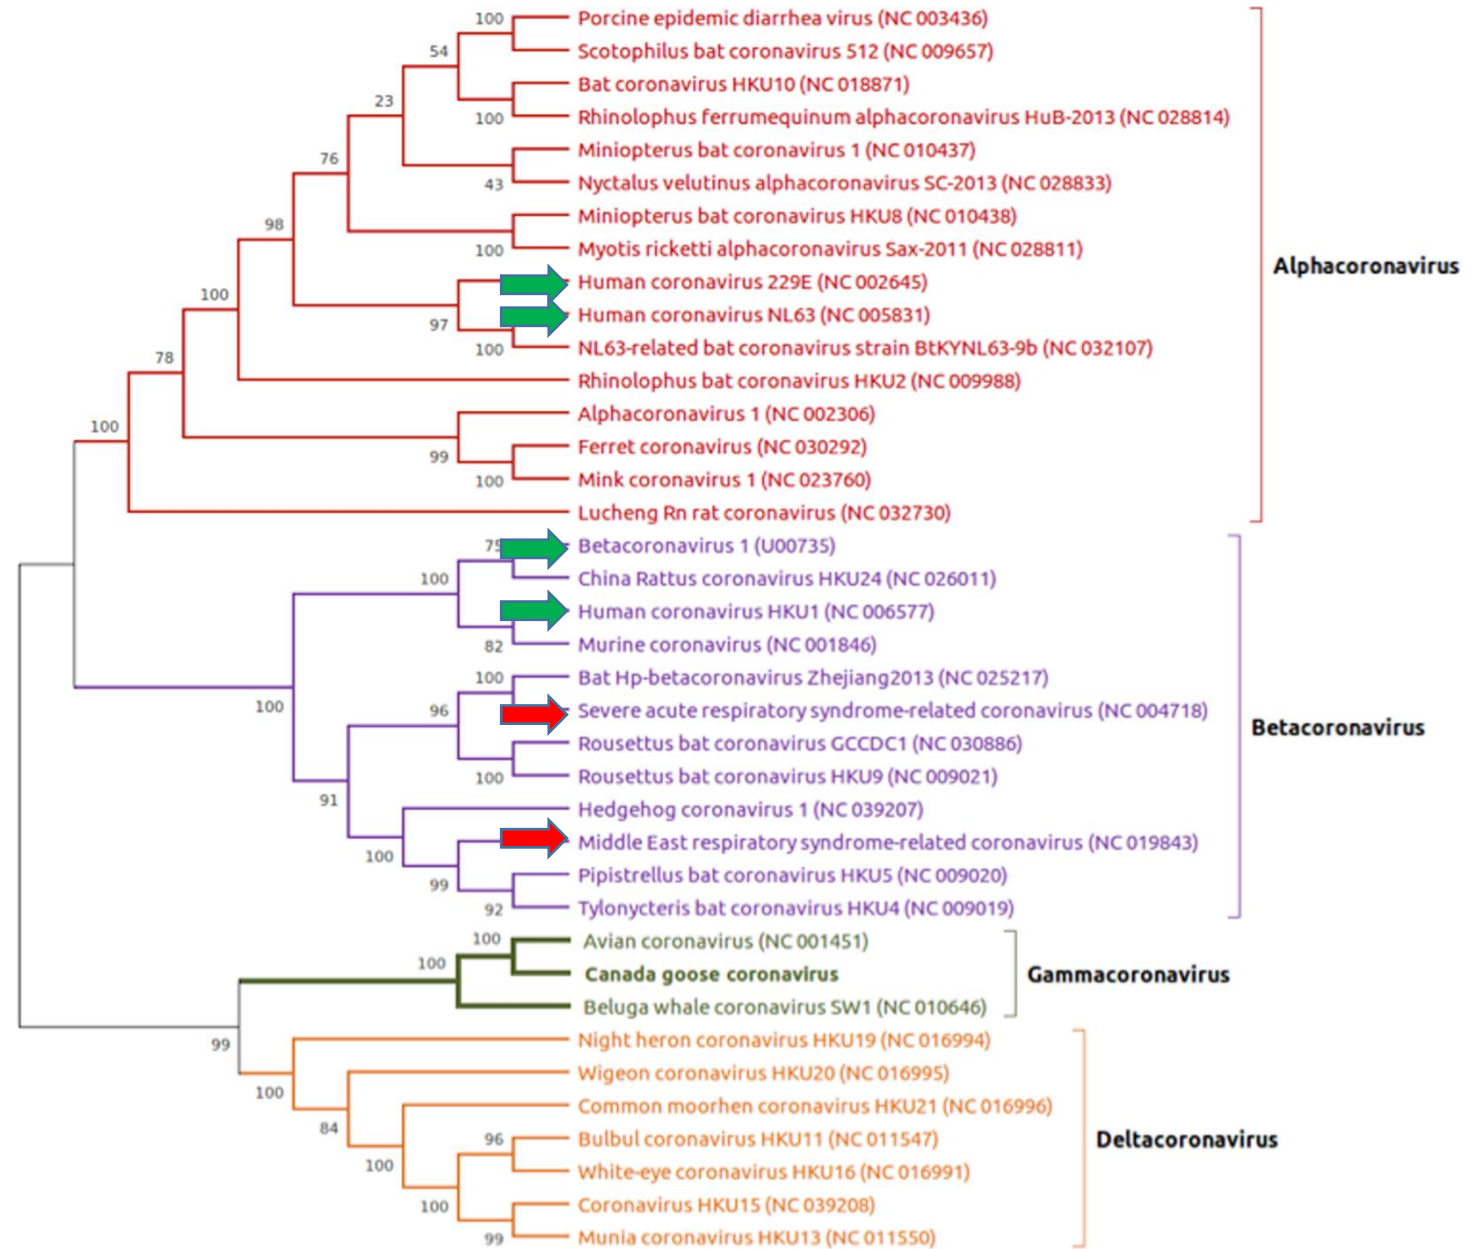

- Coronavirinae
- Torovirinae

six genera:

- **Alphacoronavirus**
- **Betacoronavirus**
- Gammacoronavirus
- Deltacoronavirus
- Bafinivirus
- **Torovirus**

The first two and the last genera contain viruses able to infect humans.

The Toroviruses are associated with diarrheal disease.

## Classification

Schematic comparison of the GISAID, Nextstrain and cov-lineages.org nomenclatures for SARS-CoV-2 sequences of world-wide origin.

# Coronaviridae

## Classification

Maximum likelihood phylogeny of globally sampled sequences of SARS-CoV-2 downloaded from the GISAID database.

## Origin of SARS-CoV-2

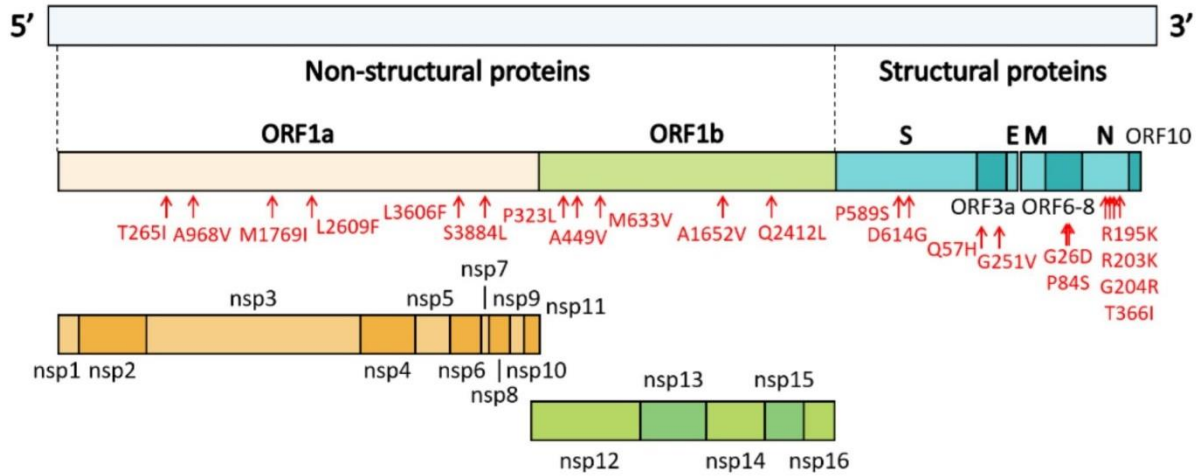

## Viral Structure

# Genomic Structure

## Genomic Structure

## Genomic Structure

# Replication Cycle

## Antiviral Agents

SARS-CoV-2 employs the serine protease TMPRSS2 for S protein priming.

TMPRSS2; transmembrane protease serine

THE UNBIASED SCIENCE PODCAST **COVID-19 Vaccines** @unbiasedscipod  
HOW DO THEY COMPARE?

<b>Moderna</b>  <b>TECHNOLOGY:</b> mRNA <i>RNA instructs our cells to produce the SARS-CoV-2 spike protein to trigger an immune response.</i> <b>EFFICACY:</b> 94.1% <b>CLINICAL TRIALS:</b> Completed Phase 3. Authorized for use in USA, Canada, U.K., Israel, Switzerland, and EU. <b>DOSE:</b> 2 doses, 28 days apart. <b>STORAGE:</b> 30 days with refrigeration, 6 months at -20°C.	<b>Pfizer-BioNTech</b>  <b>TECHNOLOGY:</b> mRNA <i>RNA template for the spike protein.</i> <b>EFFICACY:</b> 95% <b>CLINICAL TRIALS:</b> Completed Ph3. Authorized/approved in USA, Canada, U.K., Switzerland, Bahrain, Saudia Arabia, EU, Argentina, Chile, Costa Rica, Ecuador, Jordan, Kuwait, Mexico, Panama, and Singapore. <b>DOSE:</b> 2 doses, 21 days apart. <b>STORAGE:</b> Freezer storage at -70°C, 5 days with refrigeration.
<b>Oxford-AstraZeneca</b>  <b>TECHNOLOGY:</b> Viral Vector <i>A harmless virus is engineered to contain the gene for the SARS-CoV-2 spike protein</i> <b>EFFICACY:</b> 62% at the approved dosing scheme. <b>CLINICAL TRIALS:</b> Completed Phase 3, authorized for use in U.K., Argentina, India (called CoviShield), and Mexico. <b>DOSE:</b> 2 doses, 4 weeks apart. <b>STORAGE:</b> refrigerated at 2-8° C.	<b>Sinopharm</b>  <b>TECHNOLOGY:</b> Inactivated Virus <i>SARS-CoV-2 virus is rendered inert through a chemical process that preserves the structure of the virus.</i> <b>EFFICACY:</b> Reportedly 79.34% (86% in UAE trial); unpublished data. <b>CLINICAL TRIALS:</b> Phase 3 trials are ongoing; authorized/approved in China, United Arab Emirates (UAE), Bahrain, Egypt, and Jordan. <b>DOSE:</b> 2 doses, 3 weeks apart. <b>STORAGE:</b> refrigerated at 2-8° C.
<b>Johnson &amp; Johnson</b>  <b>TECHNOLOGY:</b> Viral Vector <i>A harmless virus is engineered to contain the gene for the SARS-CoV-2 spike protein</i> <b>EFFICACY:</b> not yet known <b>CLINICAL TRIALS:</b> Completed Phase 2a, expected phase 3 trial data to be released soon. <b>DOSE:</b> 1- and 2-dose schemes are being tested. <b>STORAGE:</b> 2 years frozen at -20° C, 3 months refrigerated at 2-8° C.	<b>Gamaleya</b>  <b>TECHNOLOGY:</b> Viral Vector <i>A harmless virus is engineered to contain the gene for the SARS-CoV-2 spike protein</i> <b>EFFICACY:</b> Reportedly 91.4% (unpublished data). <b>CLINICAL TRIALS:</b> Phase 3 trials are ongoing; authorized for use in Russia, Belarus, Argentina, Algeria, Bolivia, Palestine, and Serbia. <b>DOSE:</b> 2 doses, 3 weeks apart. <b>STORAGE:</b> Freezer storage (-20°C)

## Immunity

As with other respiratory viruses, immunity develops but is not absolute.

## Laboratory Diagnosis

## Prevention, and Control

Control measures that were effective in stopping the spread of SARS-2 included isolation of patients, quarantine of those who had been exposed, and travel restrictions, as well as the use of gloves, gowns, goggles, and respirators by health care workers.

Thank you
